

Annual CO2 accounting intensity of CAISO demand

- CAISO CO2 accounting / demand, energy-weighted (imports net of exports; negative hours kept)
- same, negative hours floored at zero (sensitivity)
- hourly 5th-95th percentile (variability, not a confidence interval)
- eGRID 2023 CAMX generation output rate (198): different boundary
- Dec 2023: CAISO gas data method change (affects the EIA-930 gas series, not this accounting series)
