

Data centers as a share of California's electricity: history, the adopted forecast cases and the upper bound

- CED 2025 Planning: existing 7.0-9.3 TWh plus the forecast data center additions, over statewide energy to serve load
- CED 2025 Local Reliability: existing 7.0-9.3 TWh plus the forecast data center additions, over statewide energy to serve load
- ▲ upper bound 2030: every requested MW on line, flat load (top) or at the CEC's utilization (bottom)
- history: EPRI 2023 estimate and the CEC ~1,000 MW converted, over EIA-861 retail sales
